EDUCATION

Dharmsinh Desai University

August 2024 – May 2028

Bachelor of Technology in Information Technology (CPI: 9.86) (Pursuing)

Nadiad, Gujarat

RELEVANT COURSEWORK

- Computer Networks
- Object-Oriented Programming
- Database Management Systems
- Web Development
- Data Structures & Algorithms
- Algorithms Analysis

SKILLS

- **Languages :** Java , Python , JavaScript , C , C++ , HTML5 , CSS
- **Technology :** ReactJS , NodeJS , ExpressJS , Java (JDBC , Servlets , JSP)
- **Tools :** Cisco Packet Tracer , VS Code , NetBeans , JUnit , Git , GitHub , MySQL Workbench , MongoDB Compass
- **Data Bases :** MySQL , SQL , MongoDB
- **Core CS Skills :** Computer Networks (TCP/IP , Routing & Switching , DNS , HTTP/HTTPS , Client–Server Architecture) , Data Structures and Algorithms , Object-Oriented Programming (OOP) , Problem Solving , RESTful API Design , Operating Systems ,

PROJECTS

InfraSync—Unified control for buildings and facilities (Ongoing)

[Github Link](#)

- Engineered a full-stack facility management platform for multi-building operations using React, Node.js, Express, and PostgreSQL.
- Structured a 3NF-normalized database with 15+ tables , constraints, and indexes to maintain data integrity.
- Implemented JWT-based role access for maintenance, finance, and amenities workflows.
- Optimized database performance using query analysis and connection pooling for scalability.

ScholarAI – Intelligent Scholarship Finder

[Github Link](#)

- Developed a full-stack web app for automated scholarship collection and eligibility-based matching.
- Applied client–server principles with secure authentication and profile-driven persistence.
- Integrated AI services to generate structured Statements of Purpose with fallback handling for reliability.
- Ensured robustness through normalized storage, API validation, and systematic debugging.

Java Swing–based Paint Application

[Github Link](#)

- Developed a Java Swing–based drawing application with an intuitive and responsive UI.
- Added multiple drawing utilities including freehand strokes, shapes, text rendering, and color selection.
- Designed undo and redo functionality using stack-based state tracking to preserve editing flow..
- Enabled optimized image export with efficient event handling and canvas updates.

Automated Rain Detection and Cover Control System

[Github Link](#)

- Built an Arduino-based IoT rain detection system to automatically protect clothes during rainfall.
- Processed sensor-driven automatic cover control using real-time weather detection.
- Designed a low-power, efficient embedded system for smart home use.

ACHIEVEMENTS

- Received project funding grant under **Gujarat Government’s SSIP 2.0 (Student Startup and Innovation Policy)** for ”Automated Rain Detection and Cover Control System.”
- Solved **80+** [LeetCode](#) problems across Data Structures and Algorithms
- Solved **270+** [CodeChef](#) problems, strengthening problem-solving and competitive programming skills
